A large carpeted area can provide an effective solution that ensures peace and tranquillity

- “Carpet creates a more productive work environment!” As far as interior designer Susanne Leson, co-founder of the Frankfurt office of Leson Innenarchitektur x Objektmanagement, is concerned, the positive influence of textile floor coverings in modern office environments cannot be disputed. She uses the “Data Force GmbH” rental project that she carried out in Frankfurt to demonstrate the effective added value of an office design using carpet. Her focus for the project was the design potential and the quality of INVISTA self-adhesive tiles made from Antron® carpet fibres. The result: Excellent room acoustics, a pleasant working atmosphere, a more comfortable surface to walk on and individual design solutions.

CASE STUDY:

Dataforce
Frankfurt, Germany

When it comes to creating modern office environments in existing buildings that promote well-being, satisfaction and cooperation, when flexibility is combined with individualisation and when offices are designed to be hard-wearing and functional, then there is hardly any alternative in Susanne Leson's opinion: "A pleasant atmosphere makes it much easier to concentrate on your work!"

One of the main structural challenges that needs to be overcome in the process is acoustics since a lot of office workers find sound and noise disruptive.

"A large carpeted area can provide an effective solution that ensures peace and tranquillity", says Susanne Leson. Textile flooring promotes health and well-being by improving acoustics, reducing fine dust in the air and creating a sense of warmth and comfort.

"Carpet creates a more productive work environment! It does so by providing excellent room acoustics, a pleasant working atmosphere, a more comfortable surface to walk on and individual design solutions."

And ultimately employers also profit from this, she points out. In her opinion, the benefits that textile floor coverings can bring to modern working environments should be taken into consideration a lot more for office concepts.

As far as the interior designer is concerned, criteria such as pile weight, pile material and backing construction are decisive when choosing a product:

"With carpet made from Antron® brand fibres, for example, I know that I am dealing with a high-quality product which is

appropriate for the property."

For the Dataforce project in Frankfurt, Leson Innenarchitektur x Objektmanagement chose GIRLOON carpets made from Antron® fibres and used them to create modern work environments. Susanne Leson has always enthused about the fact that besides 400 cm wide rolls, carpet is also available in the form of self-adhesive 25 x 100 cm tiles: "I found creating a design using tiles because it enabled the flooring to provide a new dynamic."

→ Antron® carpet fibres with hollow filaments minimize soil accumulation and make dirt harder to see. The hollow filaments refract and diffuse light and hide the dirt while the specially designed surfaces readily release the dirt, making cleaning easier.
