

Press Release

Tune into the right frequency with Antron® carpet fibre

United Kingdom - November 2014 – INVISTA's Antron® Lumena™ carpet fibre features in one of the freshest designs from the UK carpet tile scene, Frequency from Quadrant Carpets.

Designed and manufactured in the UK, Frequency harnesses the vibrancy and depth of colour found within the Antron® Lumena™ colour palette. Solution-dyed, the carpet fibre offers inherent light-fastness and stain-resistance, as well as the performance and resilience that the antron® brand is renowned for.

In a contemporary palette of 12 colourways ranging from the soft to the vibrant, Frequency is an adaptable carpet tile that provides designers with a wide spectrum of mood and narrative pathways. The carpet permits the blurring between linear and geometric shapes creating visual drift where defined borders once existed. Designer of the carpet tile, James Scully, explains more:

“I was inspired during a passing meteor shower, watching darkness shot through with translucent light. We had great fun in developing Frequency and I wanted to retain the feeling of dynamic movement, while providing freedom of possibility.”

Using a 12th gauge construction that offers a higher density and more durable carpet tile, Frequency also takes advantage of Antron® Lumena's ability to resist soiling, making the tile ideal for use in high traffic commercial locations.
